Hankuk University
CSE 103 C Programming
Credits: 3

Course Description
Introduction to programming in the C language: data types, control flow, functions, arrays, pointers, structures and file input/output.

Learning Outcomes
1. Write, compile and debug C programs using variables, data types and operators.
2. Use conditional statements and loops to control program flow.
3. Decompose programs into functions and use arrays and strings.
4. Use pointers, dynamic memory allocation and structures.

Textbook
K. N. King, C Programming: A Modern Approach, 2nd edition

Weekly Schedule
Week 1: Introduction to C, compiling and running programs
Week 2: Variables, data types and operators
Week 3: Input and output with printf and scanf
Week 4: Conditional statements: if and switch
Week 5: Loops: while, do-while and for
Week 6: Functions and scope
Week 7: Arrays and strings
Week 8: Midterm exam
Week 9: Pointers and pointer arithmetic
Week 10: Pointers and arrays, dynamic memory allocation with malloc and free
Week 11: Structures and unions
Week 12: File input and output
Week 13: Preprocessor and multi-file programs
Week 14: Team project
Week 15: Final exam

Assessment
Programming assignments 40%, Midterm 25%, Final exam 35%
